

Location: Emeryville, CA, USA

Job Title: Engineer

Job Description:

Other Ocean Group's Emeryville Studio is currently seeking several talented Engineers to help with a variety of upcoming projects. Candidates should be well versed and have extensive experience with C/C++. Based on background, candidates may also be involved in the implementation of multiplayer game modes, online community features, and more. Qualified candidates need to be a self-starter, able to operate in a highly dynamic environment, and have methodical and concise execution. These positions report to the Technical Director and will interact directly with all disciplines of the development team. We are looking for engineers with a variety of backgrounds to fill our ranks!

Responsibilities:

- Prototype, iterate, and execute, as required by game project
- Design, write, debug and refine game systems, features, tools and infrastructure as needed
- Work with content creators, designers, and other engineers to ensure coherence of game vision
- Implement new and enhance existing game systems and features according to the needs of the project
- Policing content creators on frame rate, memory, and asset usage
- Provide technical insight regarding online design and feature sets

Requirements:

- 2+ years programming experience
- Demonstrated proficiency in and knowledge of C/C++
- Contributed to the development of one or more shipped games, PC, console, or handheld
- Knowledge of common data structures and algorithmic solutions
- Ability to quickly understand and work with internal and externally developed code
- A strong passion for video games of many kinds

Recommended:

- University-level degree in Computer Science or related field
- Experience working in Unreal Engine 4
- Demonstrated ability to write clean, readable, portable, reliable, and optimized code on current-gen console and lower powered handheld devices
- Contributed extensively to the development for at least two shipped console games
- Expertise in network protocols and client / server & peer-to-peer architecture
